

Vincent Folliard did a PhD in chemistry at Institut de recherches sur la catalyse et l'environnement de Lyon (IRCELYON) under the supervision of Dr. Aline Auroux and Dr. Gina Postole where he worked on the acid-base properties of spinel materials used for valorization of biomass by catalysis (in collaboration with Arkema and Baikowski).

During his PhD he worked a lot on the study of surface properties of materials by adsorption calorimetry, DSC and TGA coupled or not with MS or FTIR.

From september 2022 to august 2023, he held a teaching and research position at Aix-Marseille university. His teaching activities were concentrated to kinetics, thermodynamics, inorganic and wet chemistry and electrochemistry.

At MADIREL laboratory, his research activities were dedicated to the study of storage and separation of gases by adsorption calorimetry.
