

Jerzy Jozef ZAJAC is a full professor of Chemistry at the University of Montpellier in southern France. He received a Ph. D. in Chemistry from the Maria Curie-Skłodowska University in Lublin in 1988 under the supervision of Prof. Dr. W. Rudziński. In 1988, he became a lecturer at the Faculty of Fuels and Energy at the Akademia Górniczo-Hutnicza in Kraków in Poland. He then joined the University of Montpellier as Lecturer in 2001 and was appointed Professor in 2005. His research interest and expertise are focused on the thermodynamics and modelling of interfacial phenomena occurring at Solid-Liquid and Solid-Gas interfaces as well as colloidal phenomena in solutions of surfactants and polymers. This also includes design, conception, and determination of surface properties of porous multifunctional materials for high-added-value applications in the field of environmental remediation, liquid phase heterogeneous catalysis, and energy storage. Calorimetry has remained for years his favourite tool in thermodynamic studies of interfaces. He teaches at the University of Montpellier on fundamentals of inorganic and physical chemistry of the Undergraduate Program, as well as on colloidal and interfacial phenomena at the Master level. He is currently director of the MSc Programme in Chemistry at the University of Montpellier.
